## Extinguishing systems for mobile machines

Construction machinery • Agricultural machinery • Forestry • Tunnelling • Underground mining

Safety first! Protect your valuable machine inventory with our high-quality fire extinguishing systems.

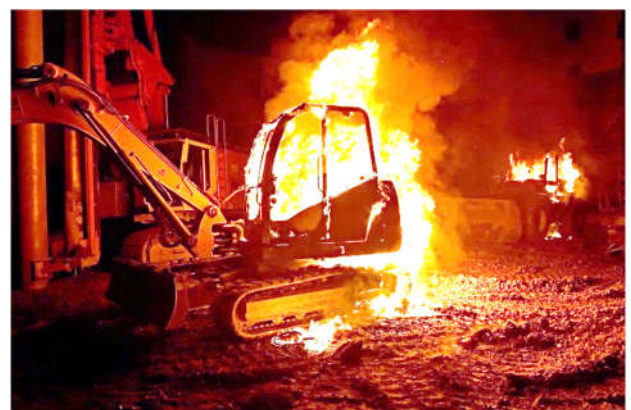

With our first-class technology, you are always well equipped. Our fire extinguishing systems are specially developed for use in working machines and offer fast and reliable firefighting. Whether construction, agricultural or forestry machinery of all kinds – our extinguishing systems adapt flexibly to your requirements and offer reliable protection.

Our fire extinguishing systems are characterized by the following outstanding features:

- Effective firefighting
- Fast response times
- Adaptability
- Reliable safety
- Usability
- Low susceptibility to faults

Protect your machines and investments from the devastating consequences of fires. Trust in our expertise and high-quality fire extinguishing systems and bring safety to the top of your priority list.

Contact us today to learn more about our fire extinguishing systems and get tailor-made solutions for you and your construction equipment. Your safety is important to us.

Your partner worldwide for individual fire protection.

## About us.

We plan, install and maintain automatic extinguishing systems for the following areas of application, among others:

### Construction

Wheel loader  
Tunnel excavators  
Cranes  
Excavator  
Forklift, etc.

### Agricultural machinery

Tractors  
Forestry

### Transport vehicles Mining machines

### Tool Machines

Grinders  
Lathes  
EDM machines, etc.

### Hardening basins

### Exhaust air filter Powder coating

### Engine test benches

### Chemical Laboratories

Cabinets  
EDV-Center  
Hazardous materials  
storage  
And more

BATEC is a global company specializing in the planning, installation and maintenance of highly reliable extinguishing systems. We can look back on over 25 years of experience in fire protection. We are particularly qualified in the field of equipping machine tools, production lines and oil mist separators as well as in the protection of working machines and extraction systems.

### Individually tailored fire protection with the highest level of Flexibility and extremely short delivery times.

We work with you to develop an optimal concept for you, taking into account your special wishes, specifications and environmental conditions. Depending on the application, we work with carbon dioxide, argon, powder or foam extinguishing agents. Different sensors are used for fire detection, such as optical flame detectors, maximum thermal and differential detectors, smoke detectors, smoke aspiration systems, etc.

Through intelligent planning of assembly dates, we achieve low production downtimes for you. We are also happy to use your company holidays for this purpose. Assemblies take place at your site or at the end customer's premises, according to your choice. Through pre-assembly at BATEC, we shorten our assembly times on site. Of course, we also carry out commissioning and handovers at your customers' premises abroad. The execution of special requests also does not cause us any trouble.

Of course, we are also available for short-term emergency interventions.

Our well-stocked warehouse and a sufficient number of fitters make it possible to promise short-term delivery dates.

Of course, we deliver our documentation in E-Plan.
